Electrical Engineering (EE) — Alongside computer engineering, this field focuses on electronics, computers, information technology, and the basic forms of energy that run our world. This exciting sector continues to deliver breakthroughs in solid-state technology (transistors, integrated circuits, VLSI chips, microprocessors, lasers, optical fibers), which in turn fuel the unprecedented revolution in telecommunications (the Internet, wireless and digital signal processing), computers (neural network, distributed, intelligent), instrumentation (biomedical, intelligent), and many other related areas.
