Vision

The Naval Information Warfare Centers (NIWC), both Pacific and Atlantic (NIWC LANT), and their DoD and Navy partners have dynamic and challenging mission protecting the nation’s interests. In support of this mission, there is a growing need for qualified candidates to fill challenging roles within the Cyber Domain.

To address this, the NIWC teams have partnered with the University of Hawaii (UH) system to develop a new and innovative approach to investing in local students and helping them grow into the cyber warriors of tomorrow.

Program Overview

The NIWC teams will be coordinating with the UH faculty and other partners, to include the Navy Cyber Defense Operations Command (NCDOC) and U.S. Naval Research Laboratory (NRL), and industry partners to identify the knowledge and skills needed for the workforce of tomorrow. The partners will then develop a list of research, engineering, information technology, network, and/or business initiatives for the summer program.

Students will work with the UH faculty and Navy partners to perform either individual or team-based research on one of the research topics identified.

Internship Details

**Timeframe:** Fall Semester 2021 - 23 Aug 2021 – 17 Dec 2021
